

ENLIGHTENED LIGATURE

Set-up Instructions

The Enlightened Ligature is very versatile. It can attain many different types of sound depending on its position and the pressure plates used.

LIGATURE POSITION

Moving the ligature forward on the mouthpieces will focus the sound; moving it to the back will spread the sound.

CHANGING PRESSURE PLATES

Your enlightened ligature comes pre-installed with an Alive Gold Pressure Plate for a free and open sound. Also included is a Heavy Copper Pressure Plate to create a lot of core to the sound, with fewer harmonics.

To further personalize your sound we recommend trying our Solid Silver, Titanium, Stainless Steel, and Vintified Pressure Plates (sold separately).

Pressure Plate Changing Instructions:

1. First remove the ligature as shown in Changing Ligature Position above.
2. Remove the Pressure Plate screw with the supplied size 00 Phillips head screwdriver. We recommend holding both the thumbscrew and pressure plate at the same time as shown here.
3. Screw on the new Pressure Plate. The supplied screw has Loctite applied to the threads. For repeated changes we suggest applying additional Loctite.
4. Replace ligature onto mouthpiece as shown above.
